

## Collagen P.I.N Microneedling

### Quick Facts:

- Estimated 400% increase in collagen within 6 months of treatment.
- Increases skin thickness.
- Treats fine lines and wrinkles, acne scars, hyperpigmentation, sun spots, stretch marks, and overall skin texture.
- Minimally invasive procedure with little to no discomfort.
- Safe on any skin type.

### FAQ:

1. **What is the Collagen P.I.N?** Collagen P.I.N is a medical grade, microneedling tool designed to stimulate your skin's natural ability to produce new collagen formation creating healthier skin. The repair process of your skin is accelerated through the creation of microscopic channels, which also allows products to penetrate into the deeper layers of the skin resulting in better product outcomes.
2. **How does it work?** The concept behind microneedling is based upon the skin's ability to naturally repair itself when injured. Microneedling allows for controlled induction of the skin's self-repair process by creating precise, micro-injuries in the skin. This automatically triggers new collagen synthesis without causing scar tissue formation.
3. **What are the benefits?** There are numerous benefits from microneedling. New collagen production can reverse years of sun damage, improve the appearance of acne scars, stretch marks, and hyper pigmentation as well as enhance the overall appearance of aging skin.
4. **Who is a candidate?** Everyone! Microneedling can be used on all skin types and can be used to address a wide range of problems.
5. **What areas of the body can I treat?** The variable needle depth on our device allows for versatility and therefore it can be used on many parts of the body, including the face, neck, décolleté, arms, hands, legs, abdomen, and back.
6. **How long does the procedure take?** The procedure typically takes 30 minutes after being numbed, depending on the size of the area being treated, the number of areas and the severity of damage on the skin.
7. **What is the downtime?** The total healing time depends on the severity of the damaged skin and the depth of the repair process required. On average, patients have redness/pinkness (like a sunburn) for 2-3 days.

8. **When do you see results?** Many patients notice healthier looking skin immediately. However, the natural repair process of your own skin continues to progress over the course of several weeks. Dermal collagen remodeling takes place over time. You may not see the final result until up to 3-6 months following your final session.
  
9. **How many treatments are recommended?** The number of treatments required will be determined based upon your individual goals and the health of your skin. It is recommended for most patients to receive a series of 3 treatments spaced about 4 weeks apart. For patients with deep wrinkles, advanced photo-aging, stretch marks or acne scars, it is recommended to receive 6-8 treatments at 4-6 week intervals.
